

Master
Transparenz-Anforderungen für Medizinische Datenräume
Transparency Requirements for Medical Data Spaces

Motivation

Medical Data Spaces (MeDS) are virtual places supporting secure exchange and integration of medical and health related data from different sources. MeDS are thereby protecting the digital sovereignty of the data owner. Transparency is a legal regulation and also one important aspect for stakeholders to participate in MeDS. Besides this the Acceptance has to be taken into account, because both criteria are interrelated.

Tasks/Goals

- Analysis how transparent medical data spaces are from different stakeholder perspectives
- Collecting requirements, creating a requirements list with transparency requirements for medical data spaces (legal, ethical, technical)

The goals shall be achieved by conducting an in-depth literature analysis in the field of Transparency and finding out how this criteria can be measured.
