

Master

Messung der Transparenz von Medizinischen Datenräumen

Measurement of Transparency of Medical Data Spaces

Motivation

Transparency is one of the key criteria for medical data spaces. In literature different definitions of Transparency exist. Concerning medical data spaces from the legal perspective transparency should be ensured. Regarding the stakeholder perspective different questions arise for instance - how transparent are medical data spaces to stakeholders.

Tasks/Goals

- Finding out how can Transparency be measured
- Elaboration of metrics for Transparency as a preparation for a prospective transparency maturity model

To achieve these goals, an in-depth literature analysis in the field of Transparency shall be conducted to find out how these criteria can be measured.
