

# Key ideas for technical security enforcement mechanisms

St. 14  
Frage  
Lösungsan

Wiederholung

- **redundancy**  
enables one  
to infer needed information,  
to detect failures and attacks and  
to recover from such unfortunate events
- **isolation**  
prevents unwanted information flows or interference
- **indistinguishability**  
makes maliciously planned observations  
appear random or uniformly expected  
and thus useless
